

321 GO terms clustered by 'binary_cut'

kinase glycosyl
nitrogen nucleoside hyaluronan bond hydrolysis gene
nucleobasecontaining organic silencing ribonucleoside
dnadependent replication catabolic
compound monophosphate dna
process metabolic

microtubule organelle dna chromosome assembly
change nuclear polymerization
organization pore distribution

negative regulation replication chromosome
metaphaseanaphase cell checkpoint gs spindle
cycle transition mitotic phase

transduction
cascade cellular canonical dopamine surface receptor fibroblast
niknfkappab lipopolysaccharidemediated wnt negative
kinasenfikappab stimulus regulation response toll
signaling pathway kappab

endocytosis localization secretion vesicle

bone remodeling nerve
vascular behavior negative regulation organ branching
bulb trabecula neuroblast olfactory multicellular
spine dendritic permeability osteoclast
development morphogenesis

cell neural regulation
proliferation stem precursor

regulation production positive
silencing gene interleukin

response

regulation positive binding

immunity mediated
