

283 GO terms clustered by 'binary_cut'

calcium
establishment cysteinetype endopeptidase
scrambling synaptic vesicle
aldosterone transport apoptotic
localization secretion
regulation positive

folic regulation monophosphate histidine cysteinetype
hydrolysis phosphorylation deubiquitination catabolic
compound endopeptidase bond
process metabolic

extension epithelium structure line
embryonic anatomical endothelial differentiation
sprouting development dopaminergic
morphogenesis angiogenesis
neuroblast neuron

extrinsic virus negative pathway cell process
programmed modulation receptors domain
apoptotic death host symbiont

migration cell

cellular signaling cascade sterol pathway ion
response hydroperoxide cobalt

division stem cell

gtp binding negative regulation

membrane
regulation junction depolymerization
organization assembly podosome

class mhc ii regulation negative
processing polysaccharide peptide
presentation antigen
