

# 321 GO terms clustered by 'binary\_cut'

bond hydrolysis gene kinase glycosyl  
 ribonucleoside nitrogen nucleoside hyaluronan  
 nucleobasecontaining organic silencing  
 dnadependent replication catabolic  
**compound** monophosphate dna

assembly  
 microtubule organelle dna chromosome  
**change** nuclear polymerization  
 organization gene distribution

chromosome  
 checkpoint gs spindle negative regulation replication  
 phase metaphaseanaphase cell  
 cycle transition test

receptor fibroblast transduction  
 negative cascade cellular canonical dopamine surface  
 toll niknfkappab lipopolysaccharidemediated wnt  
 kinasenfkkappab stimulus regulation response

**signaling** pathway kappab  
 endocytosis

branching bone remodeling nerve  
 vascular behavior negative regulation organ  
 trabecula neuroblast olfactory multicellular  
 dendritic permeability osteoclast bulb  
**morphogenesis** spine  
 development

precursor cell neural regulation  
**proliferation** stem  
 regulation production positive  
 silencing gene interleukin

**response**

regulation positive binding

**immunity** mediated

**Similarity**
