

# 579 GO terms clustered by 'binary\_cut'

biosynthetic glycosylation dnatemplated  
 modification rna nucleobasecontaining positive mrna  
 phosphorylation compound cellular expression  
 macromolecule regulation  
 serinethreonine intracellular  
 stimulus receptor regulation intrinsic damage tor absence  
 pathway response mediator  
 specification ensheathment  
 morphogenesis gamete perception system structure  
 myelination development embryonic nervous  
 organismal anatomical cell multicellular  
 binding catalytic hydrolase dna positive  
 clustering vesicle peptide hormone  
 vesiclemediated golgi intracellular cholesterol establishment  
 exogenous proliferation antigen  
 presentation neutrophil immunity response adaptive humoral  
 leukocyte mediated immunoglobulin cell alphabeta  
 transcription involved symbiotic viral virus cellular  
**host interaction process symbiont**  
 mononuclear leukocyte cell regulation positive  
 proliferation  
 synapse cytoskeleton assembly  
**organization**  
 homeostasis  
 compound acid  
 metabolic  
 regulation replication negative dna rna transcription  
**viral**  
 migration cell  
 endogenous ion  
 cell  
 apoptotic death  
**response oxygen levels**
