

650 GO terms clustered by 'binary_cut'

biological regulation growth cellular process

endopeptidase dnatemplated demethylation
rna histone modification expression nucleobasecontaining
macromolecule positive compound biosynthetic catabolic

process regulation metabolic

cholesterol endosome ion secretion retrograde anion
vesiclemediated exocytosis golgi efflux establishment coating

transport localization organic intracellular

process modulation symbiont involved

biological interaction host

damage oxygen apoptotic class
cellular levels receptor mediator signal organonitrogen abiotic

pathway stimulus transduction intracellular

response signaling

binding synthase transcription
positive transferase region regulatory hydrolase dna

function molecular catalytic activity starch

regulation glycogen gtpase

lymphocyte adaptive neutrophil
immune leukocyte immunoglobulin myeloid mediated

exogenous peptide class mhc

activation processing

presentation antigen

positive regulation process

death apoptotic neuron programmed cell

junction proteinlipid cytoskeleton
remodeling myofibril fiber subunit peroxisome ruffle podosome
proteincontaining actin biogenesis bundle filament

organization assembly

developmental optic eye central bone female
oligodendrocyte system cartilage hepatocyte
endochondral nervous differentiation

myelination organismal

development multicellular

homeostasis ph cellular

metabolic glyoxylate process
