

# 579 GO terms clustered by 'binary\_cut'

nitrogen glycosylation dnatemplated  
positive mrna biosynthetic organic phosphorus  
expression modification rna nucleobasecontaining  
phosphorylation compound cellular  
intracellular  
cascade kinase cellular absence serinethreonine  
stimulus receptor regulation intrinsic damage tor

ensheathment  
gamete perception system structure specification  
morphogenesis lymphocyte sensory cameratype  
development embryonic nervous  
anatomical cell multicellular myelination

positive  
molecular binding catalytic hydrolase dna

establishment clustering vesicle peptide hormone  
proliferation processing system antigen  
immunity response adaptive humoral exogenous  
immunoglobulin cell alphabeta presentation neutrophil

virus cellular  
symbiont transcription involved symbiotic viral  
host interaction process  
mononuclear leukocyte cell regulation positive

component junction synapse cytoskeleton assembly

organization

leucine compound acid

transcription  
double regulation replication negative dna rna

ethanol endogenous ion

process cell

anentative

response oxygen levels
