

283 GO terms clustered by 'binary_cut'

calcium activated lipid
 establishment cysteinetype endopeptidase
 scrambling synaptic vesicle
 aldosterone transport apoptotic
localization secretion

cysteinetype
 folic telomere oxidative regulation monophosphate histidine
 hydrolysis phosphorylation deubiquitination catabolic
compound endopeptidase bond

division tube extension epithelium structure line
 embryonic anatomical endothelial differentiation
 sprouting development dopaminergic
morphogenesis angiogenesis

extrinsic virus negative pathway cell process signaling
 programmed modulation receptors domain
apoptotic death host symbiont
 migration cell

cellular signaling cascade sterol pathway ion
response hydroperoxide cobalt
division stem cell

qtp binding negative regulation
 membrane
 regulation junction depolymerization
 organization assembly podosome

class mhc ii regulation negative
processing polysaccharide peptide
presentation antigen
