

321 GO terms clustered by 'binary\_cut'

hyaluronan bond hydrolysis  
 catabolic silencing ribonucleoside nitrogen nucleoside  
 monophosphate dna dnadependent replication  
**process** metabolic compound

organelle dna chromosome assembly  
 change nuclear polymerization microtubule  
 organization pore distribution

negative regulation replication chromosome  
 metaphaseanaphase cell checkpoint gs spindle  
**cycle** transition mitotic phase

receptor fibroblast  
 niknfkappab lipopolysaccharidemediated wnt dopamine surface  
 kinasenfkapab stimulus regulation response toll  
**signaling** pathway kappab

endocytosis localization secretion vesicle

organ branching bone remodeling  
 bulb trabecula neuroblast olfactory multicellular  
 spine dendritic permeability osteoclast  
**development** morphogenesis

neural regulation  
**proliferation** stem precursor cell

production positive  
 silencing gene interleukin regulation

**response**

regulation positive binding

**immunity** mediated

**Similarity**
