

241 GO terms clustered by 'binary_cut'

phagocytosis receptors tolllike
 leukocyte genes fcgamma cell signaling pathway
 response humoral receptor mediated
 chemotaxis recombination thymocyte
 somatic diversification

ubiquitindependent acid peptide hormone
 endocytosis ion exocytosis transmembrane transport
 prokaryotic sodium muscle insulin transport

purine telomere pyruvate synthesis
 peptidyltyrosine fructose ceramide removal
 monophosphate peptidylserine
 hydrolysis glucokinase pseudouridine
 phosphorylation biosynthetic
 metabolic glucuronidation bond

membrane cell
 cellcell calciumdependent plasma
 adhesion molecules
 actin

development cell morphogenesis migration differentiation

cellular stimulus receptor positive growth
 kinase regulation chemotaxis fatty inflammatory
 prostaglandin interleukinmediated response
 signaling pathway

division cytokinesis regulation cell positive

escrt budding viral host complex

potential membrane regulation negative
 assembly

phosphodiesterase regulation activity

cyclicnucleotide

remodeling

cell process

apoptotic dial negative regulation
 presynaptic active zone
