

311 GO terms clustered by 'binary_cut'

lipoprotein dnatemplated metabolic oxidation
compound processing nucleotide mrna cofactor
transcription rna elongation spliceosome
splicing nucleoside purine
ribonucleoside triphosphate

channel calcium regulation
negative potassium localization membrane secretion
cation exocytosis establishment transporter
cotranslational targeting proton
transmembrane

motility organization spindle elongation
microtubule dynein projection biogenesis
assembly microtubulebased

placenta anatomical
prostate coagulation tubule embryonic epithelial system
glandular bronchus renal regeneration erythrocyte
duct differentiation cell epithelium medulla
development

binding regulation
zona pellucida sperm
potassium mediator signal transduction
stimulus plateletderived class growth ion
response cellular

smooth muscle regulation negative
cellmatrix adhesion

lymphocyte cell negative
migration regulation

monopolar cell
polarity establishment
homeostasis cellular

binding
collagen cyclase negative regulation
