

241 GO terms clustered by 'binary_cut'

signaling pathway
 receptor mediated leukocyte genes fcgamma cell
 recombination thymocyte response humoral
 somatic diversification chemotaxis

transmembrane transport ubiquitindependent acid peptide hormone
 sodium mucus insulin transporter endocytosis ion exocytosis

peptidyltyrosine fructose ceramide removal purine
 pseudouridine monophosphate peptidylserine
 biosynthetic hydrolysis glucokinase
 glucuronidation bond phosphorylation

calciumdependent plasma membrane cell
adhesion molecules cellcell
 actin

development cell morphogenesis migration differentiation

growth
 chemotaxis fatty inflammatory cellular stimulus receptor positive
 interleukinmediated response kinase regulation

signaling pathway prostaglandin
 division cytokinesis regulation cell positive

escrt budding viral host complex

potential membrane regulation negative

assembly

regulation activity

cyclicnucleotide phosphodiesterase

remodeling

process

apoptotic glial negative regulation cell

presynaptic active zone

Similarity
