

569 GO terms clustered by 'binary_cut'

dnatemplated
 organic mrna modification nucleotide transcription rna
 macromolecule compound spliceosome ribonucleotide
 nucleoside triphosphate salvage splicing
 biosynthetic ribonucleoside purine
 process metabolic

motility
 microtubulebased cilium
 movement

cellular spindle complex elongation disassembly
 cilium ribonucleoprotein dynein organelle
 proteincontaining microtubule subunit
 projection component
 assembly biogenesis
 organization

nucleus exocytosis ion
 maintenance membrane cholesterol cation dopamine
 cotranslational location transmembrane golgi
 targeting establishment intracellular proton
 transport

developmental cell epithelium
 bronchus brain renal regeneration perception
 tube differentiation epithelial symmetry glandular
 morphogenesis embryonic polarity anatomical
 development

signaling pathway substance mediator signal oxygen
 organic insulin nutrient class plateletderived negative
 transduction levels chemical regulation hormone

response stimulus cellular
 negative regulation smooth muscle

adhesion cellmatrix

chemical ion
 homeostasis cellular cation
