

469 GO terms clustered by 'binary_cut'

positive activated supramolecular size cell calcium
projection fiber permeabilization actin focal
cytoskeleton adherens organelle centriole
assembly scrambling junction

epithelial
forebrain cerebral cell olfactory organ neuron
migration vasculogenesis telencephalon lobe blood
lung axonogenesis animal tube system
morphogenesis differentiation
development

process cell

apoptotic

amino
reactive testosterone metabolic secondary break
melanin repair glucocorticoid processing species
singlestrand doublestrand metabolite cgmp
regulation annealing negative

process biosynthetic
mechanical apoptotic
hyperosmotic inflammatory stress alkaloid wound healing
response

migration cell positive regulation proliferation involved
mediated lymphocyte stimulus degranulation
immunity immune response inflammatory
antigenic neutrophil myeloid
activation leukocyte

neural

proliferation cell precursor

lipid lipoprotein apoptotic
exocytosis targeting transport establishment

localization vacuole

motility sperm migration cell
