

469 GO terms clustered by 'binary_cut'

focal positive activated supramolecular size
adherens organelle projection fiber permeabilization actin
assembly scrambling junction cytoskeleton

organization regulation

cerebral cell olfactory organ neuron epithelial
axonogenesis animal tube system lobe blood forebrain

morphogenesis differentiation lung
development

apoptotic neuron death process cell

reactive testosterone metabolic secondary break amino
doublestrand metabolite cgmp melanin species

regulation annealing negative singlestrand
process biosynthetic

mechanical apoptotic
hyperosmotic inflammatory stress alkaloid wound healing
response cellular stimulus salt

degranulation migration cell proliferation involved
response inflammatory mediated lymphocyte stimulus
neutrophil myeloid immunity immune
activation leukocyte antigenic

proliferation cell precursor neural

targeting transport establishment lipid lipoprotein apoptotic
localization vacuole exocytosis

motility sperm migration cell
