# 650 GO terms clustered by 'binary_cut'

cellular process
biological regulation

demethylation
nucleobasecontaining endopeptidase dnatemplated
mrna acetylation rna histone modification expression
phosphorylation cellular cysteinetype ubiquitindependent
biosynthetic catabolic pyrimidine nitrogen
macromolecule positive compound
process

endosome ion secretion retrograde anion
establishment coating cholesterol microtubule amino vesicle lipid
intracellular vesiclemediated exocytosis golgi efflux
transport localization organic

involved
host process **modulation** symbiont
biological interaction

apoptotic class
intrinsic srebp tor organonitrogen abiotic damage oxygen
signal mechanical erbb oxidative steroid decreased
intracellular cellular levels receptor mediator
pathway stimulus transduction
response signaling

transcription
regulatory hydrolase dna binding synthase
starch positive transferase region
function molecular catalytic activity

ii cell neutrophil proliferation
myeloid mediated lymphocyte adaptive differentiation
mhc immune leukocyte immunoglobulin
exogenous peptide class
activation processing
presentation antigen

programmed cell positive regulation process
death apoptotic neuron

proteinlipid cytoskeleton
myofibril fiber subunit peroxisome ruffle podosome junction
ribonucleoprotein lipoprotein particle synapse component
filament remodeling stress cortical polymerization
proteincontaining actin biogenesis bundle

eye central bone female formation
hepatocyte developmental optic stem sensory
oligodendrocyte system cartilage
nervous differentiation
organismal endochondral
multicellular myelination
development

homeostasis ph cellular

metabolic glyoxylate process
