360 GO terms clustered by 'binary_cut'
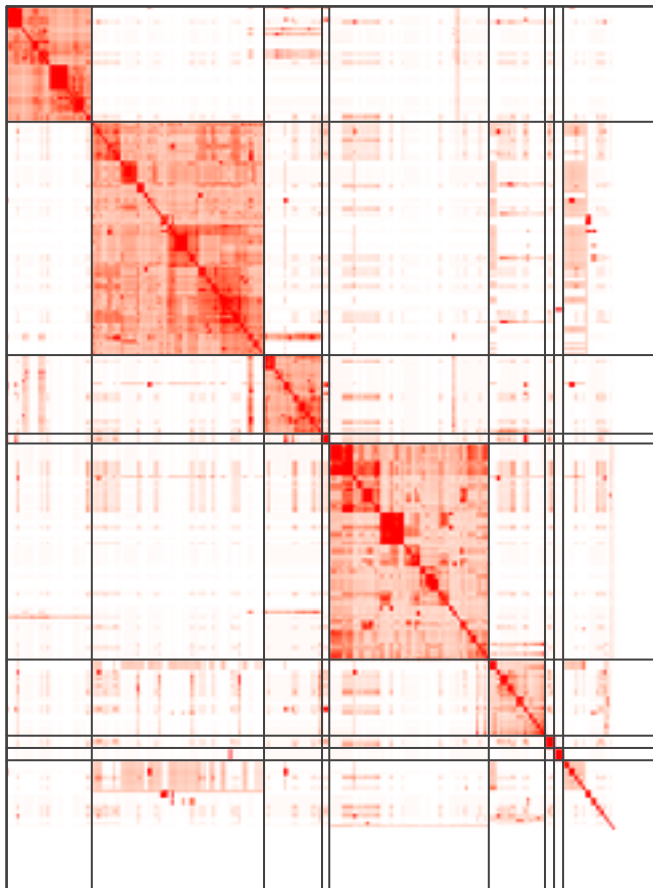

Cluster 1: nucleus, chromosome, llysine, nucleotide, mitochondrial, membrane, calcium, synaptic, ion, transmembrane, establishment, import, organelle, coenzyme, **transport localization**

Cluster 2: dorsalventral, ectodermal, epithelium, cell, branching, tissue, tract, pulmonary, migration, telencephalon, pericardium, differentiation, development, epithelial, muscle, **morphogenesis valve**

Cluster 3: maintenance, body, meiotic, actin, filament, smad, division, nuclear, bundle, pore, lamellipodium, organization, invagination, **assembly adherens junction**

Cluster 4: cycle, transition, regulation, cell, negative

Cluster 5: dnatemplated, glycogen, biosynthetic, internal, peptidyllysine, synthesis, macromolecule, oxide, nitric, polysaccharide, acetylation, positive, catabolic, llysine, **process transcription metabolic**

Cluster 6: fluid, damage, cascade, muscle, checkpoint, cellular, wnt, shear, adaptation, heat, hypertrophy, noncanonical, signaling, smoothened, **response stress pathway**

Cluster 7: **adhesion cellsubstrate negative**

Cluster 8: monopolar, cell, maintenance, **polarity establishment**
